## DETAILED ACTION

### *Allowable Subject Matter*

Claims 11-28 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record neither teaches nor reasonably suggests an inorganic short reduction layer having a through-thickness resistivity between  $10 \text{ ohm-cm}^2$  and  $1500 \text{ ohm-cm}^2$  placed between a first electrode layer and an organic EL layer, in the combination as claimed in claim 11.

Claims 12-19 are allowed by virtue of their dependency.

The prior art of record neither teaches nor reasonably suggests an inorganic short reduction layer having a through-thickness resistivity between  $10^{-2} \text{ ohm-cm}^2$  and  $10^{-7} \text{ ohm-cm}^2$  placed between a first electrode layer and an organic EL layer in the combination as claimed in claim 20.

Claims 21-28 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hiroyuki (JP 2002-100483) teaches a similar structure; however, the resistivity of the short reduction layer is not within the claimed ranges. Roitman (US 6,713,955 B1) teaches a similar structure; however, the through-thickness resistivity of the short reduction layer ("current self-limiting" layer) cannot be ascertained. Cao (US 6,866,946 B2) teaches a similar structure; however, the short reduction layer is organic and has a through-thickness resistivity that falls between, and outside of, the claimed ranges.
